INFORMATIVE NOTES TO APPLICANT RELATING TO THE PROPOSED DEVELOPMENT

The height and velocity of the final discharge are the two important factors for an effective flue design. However, with the height restriction by Network rail around their viaduct, the applicant is advised of the need for additional techniques such as an increase in efflux velocity and additional filters, etc to reduce any negative impacts of any odour. Generally, the greater the flue height, the better the dispersion and dilution of odours. Albeit, with the development site ownership restriction, this may not be possible and we are mindful to accept a low level extract subject to the above additional measures for odour mitigation. Furthermore, we also take note of the opening hours of 0800 – 1800 for the proposed activity and should there be any reason for this to be varied in future, the LPA must be notified about this.
